Prostate Cancer

NUBEQA
is pronounced
new-BEH-kah

NUBEQA HELPS YOU LIVE FOR WHAT YOU LOVE

The clinical study for NUBEQA was designed to measure overall survival (OS). NUBEQA extended OS by lowering the risk of death by 32% compared with chemotherapy* + hormone therapy† alone.

*Docetaxel.

†Hormone therapy includes gonadotropin-releasing hormone (GnRH), such as Lupron Depot® (drug treatment), or surgery that lowers testosterone.

WHAT IS NUBEQA®?

NUBEQA® (darolutamide) is a prescription medicine used to treat adults with prostate cancer that has spread to other parts of the body and responds to medical or surgical treatment that lowers testosterone (metastatic hormone-sensitive prostate cancer or mHSPC), in combination with docetaxel.

It is not known if NUBEQA is safe and effective in women or children.

IMPORTANT SAFETY INFORMATION

Before taking NUBEQA, tell your healthcare provider about all your medical conditions, including if you:

- have heart problems, high blood pressure, diabetes, or high amounts of fat or cholesterol in your blood (dyslipidemia)
- have a history of seizures, brain injury, stroke, or brain tumors

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

Important Facts About NUBEQA	14

IMPORTANT SAFETY INFORMATION (cont'd)

Before taking NUBEQA, tell your healthcare provider about all your medical conditions, including if you (cont'd):

- have kidney or liver problems
- are pregnant or plan to become pregnant. NUBEQA can cause harm to your unborn baby and loss of pregnancy (miscarriage)
- have a partner who may become pregnant. Males who have female partners who may become pregnant should use effective birth control (contraception) during treatment and for 1 week after the last dose of NUBEQA. Talk with your healthcare provider about birth control methods
- are breastfeeding or plan to breastfeed. It is not known if NUBEQA passes into breast milk

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

WHEN PROSTATE CANCER HAS SPREAD TO OTHER PARTS OF THE BODY

At this point, you and your doctor may have done a number of tests to learn more about the prostate cancer in your body. When the tests show that prostate cancer has spread to other parts of the body, it is called **metastatic**. It is important to know if your prostate cancer has spread, because your doctor may consider a different approach than the one used to treat prostate cancer that has not spread.

WHAT IS mHSPC?

IMPORTANT SAFETY INFORMATION (cont'd)

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. NUBEQA may affect the way other medicines work and other medicines may affect how NUBEQA works.

You should not start or stop any medicine before you talk with the healthcare provider that prescribed NUBEQA.

Know the medicines you take. Keep a list of them with you to show to your healthcare provider and pharmacist when you get a new medicine.

TREATING mHSPC WITH THE NUBEQA COMBINATION

FIGHT mHSPC 3 WAYS AT ONCE

NUBEQA is a pill for prostate cancer that blocks testosterone, which helps delay cancer cell growth. NUBEQA is a type of medicine called an **androgen receptor inhibitor**, or **ARI**.

Docetaxel (pronounced doe-suh-TAK-sel) is a chemotherapy that helps stop the growth and spread of cancer cells. Docetaxel is only given for approximately 4 months at the start of treatment with NUBEQA.

Hormone therapy helps lower **testosterone** levels so that prostate cancer does not continue growing or spreading. Hormone therapy may refer to an **androgen deprivation therapy (ADT)**, such as Lupron Depot[®], or may refer to a surgical treatment called an orchiectomy.

mHSPC=metastatic hormone-sensitive prostate cancer.
Lupron Depot is a registered trademark of AbbVie Inc.

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

NUBEQA[®]
(darolutamide) 300 mg tablets

CLINICALLY PROVEN TO HELP MEN LIVE LONGER

SUCCESSFUL RESULTS IN A CLINICAL TRIAL OF 1305 MEN WITH mHSPC

- 651 men received the NUBEQA combination
 - Patients who were given the NUBEQA combination in the clinical trial received chemotherapy* for 6 cycles (approximately 4 months) and continued receiving NUBEQA and hormone therapy† until their doctor stopped their treatment
- 654 men received chemotherapy* + hormone therapy† alone
 - Patients received chemotherapy* for 6 cycles (approximately 4 months) and continued receiving hormone therapy† until their doctor stopped their treatment

The study measured **overall survival (OS)**, which is the length of time a person may live after starting therapy. The study also measured the length of time before disease progressed to mCRPC‡ and the length of time before pain progressed.

*Docetaxel.

†Hormone therapy includes gonadotropin-releasing hormone (GnRH), such as Lupron Depot® (drug treatment), or surgery that lowers testosterone.

‡mCRPC=metastatic castration-resistant prostate cancer, which is prostate cancer that has spread to other parts of the body and no longer responds to hormone therapy.
mHSPC=metastatic hormone-sensitive prostate cancer.

IMPORTANT SAFETY INFORMATION (cont'd)

NUBEQA may cause serious side effects, including:

- **Heart disease.** Blockage of the arteries in the heart (ischemic heart disease) that can lead to death has happened in some people during treatment with NUBEQA. Your healthcare provider will monitor you for signs and symptoms of heart problems during your treatment with NUBEQA. Call your healthcare provider or get medical help right away if you get chest pain or discomfort at rest or with activity, or shortness of breath during your treatment with NUBEQA

NUBEQA HELPS YOU LIVE FOR WHAT YOU LOVE

AT 4 YEARS OF TREATMENT IN THE CLINICAL STUDY

MEN LIVED LONGER WITH NUBEQA

More men who received the NUBEQA combination were still alive (63% compared with 50% of the men who received chemotherapy* + hormone therapy†)

- The NUBEQA combination extended OS by lowering the risk of death by 32%

MORE TIME WITHOUT PAIN PROGRESSION

- NUBEQA lowered the risk of time to pain progression by 21%

THE BOTTOM LINE

Chemotherapy* + hormone therapy† is a guideline-recommended treatment for mHSPC. Adding NUBEQA may help you live even longer.

IMPORTANT SAFETY INFORMATION (cont'd)

NUBEQA may cause serious side effects, including (cont'd):

- **Seizure.** Treatment with NUBEQA may increase your risk of having a seizure. You should avoid activities where a sudden loss of consciousness could cause serious harm to yourself or others. Tell your healthcare provider right away if you have loss of consciousness or seizure

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

NUBEQA[®]
(darolutamide) 300 mg tablets

POSSIBLE SIDE EFFECTS WITH NUBEQA

NUBEQA may cause serious side effects, including:

- **Heart disease.** Call your healthcare provider or get medical help right away if you get chest pain or discomfort at rest or with activity, or shortness of breath during your treatment with NUBEQA
- **Seizure.** Tell your healthcare provider right away if you have loss of consciousness or seizure

NUBEQA may cause fertility problems in males, which may affect their ability to father children. Talk to your healthcare provider if you have concerns about fertility.

TALK TO YOUR DOCTOR ABOUT THE MEDICINES YOU ARE TAKING

Although NUBEQA has a limited potential to interfere with other medicines, it may interfere with some medicines you are taking. So be sure to tell your doctor about all the medicines you are taking, including over-the-counter medicines and supplements.

IMPORTANT SAFETY INFORMATION (cont'd)

The most common side effects of NUBEQA when used in combination with docetaxel in people with mHSPC include:

- constipation
- rash
- decreased appetite
- bleeding
- weight gain
- high blood pressure
- decreased red blood cells (anemia)
- high blood sugar levels
- decreased white blood cells (neutropenia)
- increase in liver function tests
- low blood calcium levels

*Hormone therapy includes gonadotropin-releasing hormone (GnRH), such as Lupron Depot® (drug treatment), or surgery that lowers testosterone.

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

NUBEQA[®]
(darolutamide) 300 mg tablets

HOW TO TAKE NUBEQA

FOLLOW YOUR DOCTOR'S INSTRUCTIONS WHILE TAKING NUBEQA

The recommended dose of NUBEQA is 600 mg (two 300 mg tablets) taken by mouth, twice daily

- Take NUBEQA with food
- Swallow NUBEQA tablets whole
- If you miss a dose of NUBEQA, take your normal dose as soon as possible prior to the next scheduled dose
 - **Return to your normal schedule on the following day. Do not take 2 doses together to make up for a missed dose**
- Your doctor may change your dose, temporarily stop, or completely stop your treatment with NUBEQA if you have certain side effects. Do not stop taking your prescribed dose of NUBEQA without talking with your doctor first
- If you take more NUBEQA than prescribed, call your healthcare provider right away

THE NUBEQA COMBINATION FIGHTS YOUR CANCER 3 WAYS AT ONCE

After chemotherapy† has concluded, continue taking NUBEQA + hormone therapy until your doctor tells you to stop

*Hormone therapy includes gonadotropin-releasing hormone (GnRH), such as Lupron Depot® (drug treatment), or surgery that lowers testosterone.

† Docetaxel.

YOUR DOCTOR WILL ADMINISTER HORMONE THERAPY*

- You should continue hormone therapy during your treatment with NUBEQA unless you had surgery to lower the amount of testosterone in your body (surgical castration)
- Hormone therapy medications are given by injection or are implanted under the skin

YOUR DOCTOR WILL BEGIN CHEMOTHERAPY† WITHIN 6 WEEKS OF STARTING NUBEQA

A chemotherapy called docetaxel is given as an intravenous (IV) infusion in your arm.

- Docetaxel is given once every 21 days, or as recommended by your doctor
- A total of up to 6 treatments will be administered, lasting ~4 months
- Your doctor may change, delay, or stop treatment with docetaxel if needed

TIP

Set a reminder on your phone to remind you when to take NUBEQA

IMPORTANT SAFETY INFORMATION (cont'd)

NUBEQA may cause fertility problems in males, which may affect the ability to father children. Talk to your healthcare provider if you have concerns about fertility.

These are not all the possible side effects of NUBEQA.

Call your healthcare provider for medical advice about side effects. You may report side effects to the FDA at 1-800-FDA-1088.

Please see additional Important Safety Information throughout and the full [Prescribing Information](#).

IMPORTANT FACTS ABOUT NUBEQA® (darolutamide) tablets

WHAT IS NUBEQA?

NUBEQA is a prescription medicine used to treat adults with prostate cancer:

- That has not spread to other parts of the body and no longer responds to a medical or surgical treatment that lowers testosterone (non-metastatic castration-resistant prostate cancer or nmCRPC), **or**
 - That has spread to other parts of the body and responds to medical or surgical treatment that lowers testosterone (metastatic hormone-sensitive prostate cancer or mHSPC), in combination with docetaxel
- It is not known if NUBEQA is safe and effective in females or children.

WHAT SHOULD I TELL MY HEALTHCARE PROVIDER BEFORE TAKING NUBEQA?

Tell your healthcare provider about all your medical conditions, including if you:

- Have heart problems, high blood pressure, diabetes, or high amounts of fat or cholesterol in your blood (dyslipidemia)
- Have a history of seizures, brain injury, stroke, or brain tumors
- Have kidney or liver problems
- Are pregnant or plan to become pregnant. NUBEQA can cause harm to your unborn baby and loss of pregnancy (miscarriage)
- Have a partner who may become pregnant. Males who have female partners who may become pregnant should use effective birth control (contraception) during treatment and for 1 week after the last dose of NUBEQA. Talk with your healthcare provider about birth control methods
- Are breastfeeding or plan to breastfeed. It is not known if NUBEQA passes into breast milk

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. NUBEQA may affect the way other medicines work and other medicines may affect how NUBEQA works.

You should not start or stop any medicine before you talk with the healthcare provider that prescribed NUBEQA.

Know the medicines you take. Keep a list of them with you to show to your healthcare provider and pharmacist when you get a new medicine.

HOW SHOULD I TAKE NUBEQA?

- Take NUBEQA exactly as your healthcare provider tells you
- Your healthcare provider may change your dose, temporarily stop, or completely stop your treatment with NUBEQA if you have certain side effects
- Take your prescribed dose of NUBEQA 2 times a day with food
- Swallow NUBEQA tablets whole
- If you are receiving gonadotropin-releasing hormone (GnRH) analog therapy, you should continue with this treatment during your treatment with NUBEQA unless you have had a surgery to lower the amount of testosterone in your body (surgical castration)
- If you miss a dose of NUBEQA, take your normal dose as soon as possible before your next scheduled dose. Do not take 2 doses together to make up for a missed dose
- If you take more NUBEQA than prescribed, call your healthcare provider right away

Pronounced new-BEH-kah

WHAT ARE THE POSSIBLE SIDE EFFECTS OF NUBEQA?

NUBEQA may cause serious side effects, including:

- **Heart disease.** Blockage of the arteries in the heart (ischemic heart disease) that can lead to death has happened in some people during treatment with NUBEQA. Your healthcare provider will monitor you for signs and symptoms of heart problems during your treatment with NUBEQA. Call your healthcare provider or get medical help right away if you get chest pain or discomfort at rest or with activity, or shortness of breath during your treatment with NUBEQA.
- **Seizure.** Treatment with NUBEQA may increase your risk of having a seizure. You should avoid activities where a sudden loss of consciousness could cause serious harm to yourself or others. Tell your healthcare provider right away if you have loss of consciousness or seizure or others. Tell your healthcare provider right away if you have loss of consciousness or seizure.

The most common side effects of NUBEQA in people with nmCRPC include:

- Increase in liver function tests
- Decreased white blood cells (neutropenia)
- Feeling more tired than usual
- Arm, leg, hand or foot pain
- Rash

The most common side effects of NUBEQA when used in combination with docetaxel in people with mHSPC include:

- Constipation
- Rash
- Decreased appetite
- Bleeding
- Weight gain
- High blood pressure
- Decreased red blood cells (anemia)
- High blood sugar levels
- Decreased white blood cells
- Increase in liver function tests
- Low blood calcium levels

NUBEQA may cause fertility problems in males, which may affect the ability to father children. Talk to your healthcare provider if you have concerns about fertility. These are not all the possible side effects of NUBEQA. Call your doctor for medical advice about side effects.

HOW SHOULD I STORE NUBEQA?

- Store NUBEQA at room temperature between 68°F to 77°F (20°C to 25°C)
- Keep the bottle tightly closed after you first open it

Keep NUBEQA and all medicines out of the reach of children.

The information provided here is not comprehensive.
